Since this will simply be for sampling, I don't see anything that is going to cause a problem or require discussions with management or anything that would slow down a response for the record.

It is fairly informal. We have the call to discuss the background and the proposed actions. We are usually able to give a verbal acknowledgment that we agree with your proposed actions followed by an email to more officially document the consultation for the administrative record. That usually all happens a day or two after the call at most.

Linda anything else to add from your perspective?

I'm sorry, I had meant to say likely to start the sampling end of June, either way, I believe that would give us enough time. How long after consultation does it typically take to receive approval?

Great that should work. We will look to schedule something the second week of May (10-14th)

I will add all those on this email for now, please feel free to forward it to others as appropriate.

We are anticipating conducting this sampling in the summer (likely end of July), I would think with that logic we should have this consultation by mid-May.

We are looking to schedule this consultation as a joint effort between OSRTI and OEM. What is your timeframe in which you need the consultation to occur?

Thanks,
Brian

Subject: Blades- Follow-Up Consultation for Sampling PFAS in Drinking Water

Good morning Linda and Brian,
Please see attached. I am requesting a follow up consultation for the sampling of drinking water wells at Blades Superfund Site (in Seaford Delaware), planned to occur this summer.

As a real brief backstory, PFAS was sampled in the public and private wells back in 2018 during the Site Assessment, prior to the Site being listed to the NPL, and PFAS was detected above the HAL. Currently our remedial program's contractor is developing a UFP-QAPP for the sampling of private residential wells and the public water supply wells for PFAS compounds and other contaminants of potential concern.

I had my initial consultation in July 2020, prior to the Site being listed to the NPL, based on the upcoming remedial investigation and received notification that the Blades site qualifies for a streamlined PFAS consult and may proceed with sampling once ready.

I also attached the 2018 final Site Inspection report if you are interested in learning more about the Site, with that being said, I am happy to answer any questions as well.

Thank you. I look forward to speaking with you.
